SUMMARY

Motivated Advanced Computer Science student with a strong foundation in software engineering, data structures, and algorithmic problem-solving. Experienced in developing practical applications, working in agile teams, and using modern programming frameworks. Seeking an internship to apply technical skills, gain industry experience, and further develop in a real-world software engineering environment.

EDUCATION

Curtin University | Bachelor of Advanced Computer Science Honours | 79 CWA | February 2024 - Ongoing

- Coursework: Database Systems, Computer Communications and Networks, Data structures and Algorithms, Machine Learning, Operating Systems
- Letter of Commendation (2025) for Attaining a score of above 80

Willetton Senior High School | High School Diploma | 96 ATAR | 2018 – 2023

- Course Work: English, Methods, Chemistry, Human Biology, Physics

PROJECTS

GenAI for Controlled Human Mobility Data Generation | Curtin University | Feb 2026 – On going

- Built a Python-based GenAI pipeline to generate controlled synthetic human mobility trajectories from real mobility datasets
- Implemented RAG-based trajectory retrieval using FAISS, embeddings, and OpenAI models to condition generated movement patterns
- Pre-processed mobility data into structured categories for trajectory generation
- Evaluated generated trajectories using cosine similarity, Dynamic Time Warping (DTW), Euclidean distance, and visual trajectory comparisons

AI Virtual Health Assistant for CALD Healthcare Support | Curtin University | Feb 2025 – Oct 2025

- Developed a cross-platform AI virtual health assistant using Flutter and SQLite to support culturally and linguistically diverse healthcare users
- Implemented profile management, conversation history, and structured patient data storage to support personalised health interactions
- Built document-based retrieval using LangChain, FAISS, and retrieval-augmented generation (RAG) pipelines for health information access
- Improved response reliability through LLM prompt engineering, content safety filters, accessibility-focused design, and human-in-the-loop review

WORK EXPERIENCE

Seafood Processor | KB Seafood | Oct 2024 – Present

- Processed crayfish products to strict food safety and SOP standards while operating specialised machinery in a high-volume production environment
- Managed warehouse operations including palletising, truck unloading, cold storage handling, and outbound dispatch to ensure accurate, on-time delivery
- Used WMS for inventory tracking and order fulfilment, maintaining high accuracy and meeting daily production and shipping targets

Volunteer Store Helper | Save the Children - Op Shop | July 2025 – Present

- Assisted customers in-store, processed transactions and maintained high standards of service
- Supported store operations including stock receiving, pricing, replenishment, and housekeeping

Volunteer Helper | Local Community Events | 2019 – 2021

- Helped with event organization, crowd control, and logistics
 - Operated audio systems for effective sound management
 - Helped with setup, cleanup, and general event area maintenance
-

TECHNICAL SKILLS:

- **Programming Languages:** Java, Python, SQL, Kotlin, C
- **Tools:** Flask, REST APIs, SQLite, NumPy, Pandas, RAG, LangChain, FAISS, Pytorch, HTML, CSS, Git, VIM

INTEREST & LANGUAGES

- Coding, Calisthenics & Gym, Learning Languages, Hiking & Running
- English (Native), Urdu (Native), French (Beginner), Arabic (Beginner)
